In the State of Illinois, 23% of total municipal solid waste that was landfilled in 2007 was C&D material. But many of these materials are resources that can be recovered, reused, and recycled!

What is being done to recover the material in the Greater Chicago area?
In November 2012, a Demolition Debris Diversion Ordinance was put into effect in Cook County, requiring that 70% of all construction and demolition (C&D) debris be recycled and an additional 5% be reused. Lake County’s Recycling Ordinance also enforces a 75% recycling and reuse requirement on C&D projects, and Will County has requirements for diversion in their Zoning Ordinance.

What is being done in Kane County?
In Kane County we are currently promoting a voluntary approach, informing contractors and home builders of the options for recycling in this area. On the other side of this flyer you will find a list of companies in the area that offer services for recycling, reuse, and disposal of construction and deconstruction materials.

What are the benefits of diversion vs. landfill?
“The benefits of C&D diversion go beyond the positive environmental impacts. It also creates jobs, stabilizes local economies, and creates a supply stream for manufacturing, as well as materials for construction, renovation and infrastructure building. Diverting 5% from only about 30 houses could support at least one new retail center, with 3-5 jobs, and 25-30 full-time deconstruction workers.”

Do I get credit or money back for recycling this material?
Recycling or reusable material from deconstruction contributes to points in both LEED green building certification and Green Globes programs. In the Material and Resources Category of LEED Certification, 2 credits may be earned through diverting between 50-75% of construction, demolition, and land clearing debris from landfill disposal. Further, working with a deconstruction company can offer you a financial return as well as tax savings for the donation of materials.
